

TWO NEW WOODEN BRIDGES AT VATHORST

29-04-2009

Construction is moving along at Vinex site Vathorst. Another two of in total 40 new bridges are now under construction. In a few weeks, the two new wooden bridges will allow pedestrians to reach the Japanese inspired green park, situated in the heart of Laak 1.

West 8 together with Kuiper Compagnons made a masterplan for the Vinex site Vathorst in Amersfoort. The public space is dominated by the presence of water. Therefore there are over 40 bridges connecting the different parts of the new site. These parts have their own identity which is also expressed in the varying architecture of the bridges.
